DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yen et al (5,032,274). Yen et al disclose a membrane a membrane made of the claimed material, the membrane is an asymmetric hollow fiber membrane and has an IPA bubble point within the disclosed range in the present invention, therefore the flow time for passing 500 ml of isopropyl alcohol can be expected by the skilled in the art at the time the invention was made. The rejection is discussed in detail on Office action of July 30, 2003, and is maintained.

Response to Arguments

3. Applicant's arguments filed 9/17/03 have been fully considered but they are not persuasive. Applicant argues that reference to Yen et al utilize an extrusion process for producing the membrane different from the "process" of Yen et al, and the membrane properties currently claimed can only be produced by extrusion without any air gap. Claims 1-6 in the present invention are directed to a product, and not to a "product by process", or to a process of making the membrane. Since the product membrane of Yen et al (5,032,274) contain the bubble point for IPA, the asymmetric structure, the hollow fiber configuration, and the membrane material, the "flow time", as claimed in claim 1

and dependent claims, for the same area of membrane, and for the same volume of IPA is expected to be the same, or to be obvious to one skilled in the art at the time the invention was made, and furthermore to be inherent of the membrane having for example a bubble point for IPA of 15 psi.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
